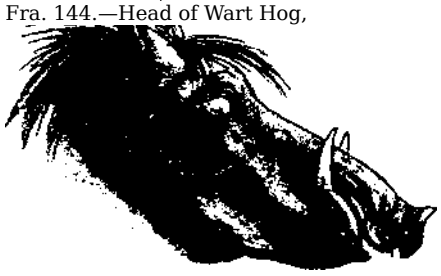
in this country down to so late a period as the end of the sixteenth century.

The African "Wart Hog, genus *JPhctcochoerus,* is usually regarded

FIG. 143.—Wart Hog. *Phacochoerus aetMopicus,*

Fra. 144.—Head of Wart Hog,



x £.

as the type of a distinct genus of Tigs. This animal, " superlatively ugly " with its huge tusks and great protuberances upon the face, is chiefly to he distinguished from the genus *Sus* by these characters, and "by the complexity of the last molar, which, with the tusks, are sometimes in. aged animals the only teeth left. The complete formula is Pmf- M-|, There are two species of this genus, *JP. aetJiiopicus* and JR. *africanus.* "When enraged the Wart Hog is said to carry its tail directly up, and to present a ludicrous as well as ferocious appearance.

The Celebesian Babyroussa, genus *jBetfrirtisct,,* is an almost

hairless hog with enormously upturned tusks in both jaws of the
